BUILDING NEW FLUE AT ELECTRIC STATION.

Entire Dependence on Onus Power Company for Two Weeks During Change.

Supt. W. F. Bogue of the gas and electric department states that he expects to start this week on a new flue for the boilers, which will be larger than the present one. This will connect the present boilers with the stack, and while it is being connected the boilers will be out of use. It will be of brick about seven feet in height and four feet in diameter, and will be placed in the boiler.

While the boilers are down the new system of steam piping will be installed, and the entire job it is expected will require two weeks. The pipes which are to be changed are so old that they can be gotten out readily in a basement, it being necessary to crawl under floors and work in uncomfortable positions when it was necessary to give attention to the pipes under the present system.

The Onus Power company will be depended upon entirely during the period, and there being plenty of water at the Scotland dam, this is considered the best time to attempt the work. Water is running over the dam at the power station and it has been turning the electricity steadily for months. The excavation for the foundation for the new turbine has been completed, and some additional work has been done. The turbine generator is to be shipped May 15 and should reach here before the first of June.

ALL SEEM SATISFIED WITH SUNDAY CLOSING

Tried Three Times Now and the Plan of the Postmaster Works Well.

Last Sunday made the third trial for the Sunday closing of the postoffice and the modified collection routes and Postmaster William Caruthers has reported that the plan continued to work just as satisfactorily as it did when he tried it for the first time three weeks ago. The collection routes were covered on time and the shortened service at the post-office window is proving adequate for all the needs of the public. He now has the cards in all the boxes, so that people can tell whether the box they are putting a letter into on Sunday is one from which a collection will be made that day.
